a. Boundary attacker under drift
victims compromised (%)
attacker share of the victim's traffic
b. Safety and liveness together
victims compromised (%)
false alarms after honest drift (%)
FOA
static
c. Detection over time, share 0.3
target attack detected (%)
learning cycle
poisoning starts
Naive self-labelling
Signature-free, single device
Outlier-ratio gate
Alarm-rate switch-off
Per-cycle clipping
Frozen-reserve screen
TOA, oracle signature
